OBJECTIVE

Software Engineer with **1.5 years** of professional experience specializing in Backend and Full-Stack Development, with hands-on experience in Node.js, Express.js, TypeScript, and MongoDB, seeking full-time backend-focused software engineering roles.

EDUCATION

BS Computer Science, National College of Business Administration Economics

Expected 2028

SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, React Router, TanStack Query, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Webhooks, Microservices

Databases & Infrastructure: MongoDB, Redis

AI: Gemini API, OpenAI API, AI-powered automation

Tools: Git, GitHub, Postman, Vercel

EXPERIENCE

Backend Software Engineer

Sep 2026 - Present

Hashloops Technologies

Lahore, PK

- Built and maintained scalable backend services using Node.js, TypeScript, and Express.js across multiple projects, delivering clean and reliable APIs within an agile team environment.
- Developed background job systems with BullMQ and Redis to handle tasks like notifications, data processing, and report generation reliably at scale.
- Designed and optimized MongoDB schemas with Mongoose, improving query performance by 30% through proper indexing, data structuring, and write optimization across different project databases.
- Contributed to migrating backend services to AWS Lambda and AWS API Gateway, helping the team reduce infrastructure overhead and keep response times consistently under one second.
- Tested and validated APIs across projects using Jest, Supertest, and Postman, making sure all endpoints were stable and production-ready before every release.
- I Identified and resolved backend bottlenecks across projects through profiling and query analysis, consistently improving response times and reducing server load.
- Followed clean code practices and participated in peer code reviews on GitHub, helping maintain consistency and catching bugs early before they reached production.

Backend Developer Intern

Aug 2026 - Sep 2026

Live Pakistan

Islamabad, PK

- Developed backend services and RESTful APIs using Node.js, Express.js, and TypeScript for scalable web applications and SaaS platforms.
- Designed and implemented modular backend architectures, authentication flows, business logic, validation, error handling, and third-party integrations.
- Worked with MongoDB and Redis for data persistence, caching, session management, and performance optimization. • Built webhook-driven and event-based workflows, including asynchronous processing and reliable service communication.
- Integrated external services such as Stripe, Gemini API, WhatsApp, Google Sheets, Notion, and Airtable into backend systems.
- Implemented multi-tenant functionality, role-based access controls, idempotent transaction handling, and secure administrative operations.
- Used Git, GitHub, Postman, Docker, and deployment platforms to support development, testing, and production workflows.

Frontend Developer Intern

Jan 2026 -June 2026

Developers Hub Corporation

Islamabad, PK

- Developed responsive React 18 + TypeScript applications using Tailwind CSS and reusable components
- Integrated REST APIs, improved frontend workflows, and collaborated through Git/GitHub.
- Received Best Intern Award for technical performance.

Onboarding Research Manager

Oct 2025 - Present

Developers Hub Corporation

London,England, UK

- Lead onboarding research to identify user behavior, friction points, and activation opportunities.
- Collaborate with Product, UX, Engineering, and Marketing to turn research into product improvements.
- Analyze user feedback and onboarding experiments to improve user experience and engagement.

PROJECTS

1. **DevSync Real-Time File Synchronization & Backup Platform** Built a cross-platform file synchronization and backup platform with real-time workspace synchronization, conflict resolution, and transfer monitoring. Designed a TypeScript monorepo integrating an Electron desktop client, Node.js/Express backend, developer CLI, and shared packages. Containerized the backend with Docker and configured Caddy-based infrastructure for self-hosted deployments.([View here](#))
2. **Payment Platform | Event-Driven Multi-Tenant Payment Infrastructure** Built a scalable multi-tenant payment infrastructure with 12 independent microservices supporting merchant management, multi-gateway payments, subscriptions, refunds, payouts, and webhook processing. Implemented RabbitMQ events/RPC, Redis-backed distributed idempotency, JWT authentication, and tenant isolation for reliable transaction processing. Developed a Node.js SDK with payment, subscription, payout, refund, and HMAC-secured webhook integrations for merchants.([View here](#))

3. **DayFlow AI | Multi-Tenant Business Assistant.** Built a multi-tenant AI business assistant that provides SMEs with business insights and automated responses through WhatsApp. Integrated Gemini AI with Google Sheets, Notion, and Airtable to provide contextual analytics and responses. Implemented tenant management, data synchronization, caching, voice transcription, PDF reporting, and administrative controls. ([View here](#))

EXTRA-CURRICULAR ACTIVITIES

- Continuously research and experiment with emerging technologies, developer tools, AI frameworks, and modern engineering practices, applying relevant tools to personal and academic projects.

LEADERSHIP

- Lead university project teams by coordinating technical tasks, responsibilities, and timelines from requirements analysis through final implementation.
- Guide teammates through technical problem-solving, Git/GitHub workflows, and implementation decisions while keeping projects aligned with requirements and deadlines.
